Our Product Features !

We Use Latest Technologies

The integration of the latest programming technologies into software development is not just a trend but a necessity for staying competitive in today's fast-paced digital world. By embracing innovations like AI, Cloud Server, DevOps, Messaging, IoT, PWAs, and API integrations, developers can create more efficient, secure, and scalable applications. Continuous learning and adaptation to new technologies will ensure that software development remains at the forefront of technological advancement, delivering unparalleled value to businesses and users alike.

Integration with Modern Technologies

We integrate the modern technologies and Artificial Intelligence in different modules of CTrack Systems and with devices like Pocket PC/ PDA, BarCode Readers, RFID, POS, Biometric/ Time Attendance, Conveyor Belt Systems for Sorting of Shipments in Boxes and Bags, helping transport companies or industries to get their work done quickly and efficiently by reducing transport in their day-to-day operations.

Customized Software

CTrack ERP Systems is tailor-made software which can be customized into any type of modules and also for the industry sector whenever and wherever required. We continue to research and develop and work on our next-generation products just so that your experience of working with us remains even smoother and your work gets done with minimal physical force.
